

— FOR LAW ENFORCEMENT & PUBLIC SAFETY

Security testing for mission-critical AI that can't tolerate downtime, data exposure, or unverified deployment.

Dispatch, records, and investigative AI systems don't get a second chance at a failure. RedLens tests for containment escapes and adversarial attacks before deployment, runs fully air-gapped when your environment requires it, and maps every finding to the NIST AI RMF.

— THE CHALLENGE

- Dispatch, 911 triage, and records-query AI are mission-critical — a failure isn't just downtime, it's a public-safety event.
- AI agents that can break out of their sandbox ("containment escape") could take unauthorized action or expose data outside their intended scope.
- Many environments can't route traffic to an external service and require a fully disconnected deployment.

— HOW REDLENS HELPS

Air-Gapped Deployment

A full self-hosted Docker deployment on Enterprise, on-premise, with no outbound network dependency required to run assessments.

Containment-Escape Detection

Tests specifically for AI sandbox escape: network escape, behavioral deviation, and micro-step attack chains — part of the Master Attack Schema v2.0.

Digital Twin Sandbox

Synthetic, clearly-labeled dispatch and records-style data — mock incident logs, unit IDs, case identifiers — none derived from real calls or records.

Evidence Packages

Point-in-time, auditor-ready records of what testing actually captured, mapped to NIST AI RMF — evidence-recorded, partial, or gap. Documents evidence, never certifies compliance.

— COMPLIANCE & DEPLOYMENT

Every finding maps to the **NIST AI Risk Management Framework**, and Enterprise deployments can add a **custom SLA** negotiated as part of the engagement.

Straight talk on certification: RedLens does not currently hold CJIS compliance, FedRAMP authorization, or any other government certification. What's available today is NIST AI RMF-mapped findings, air-gapped Docker deployment, and a custom SLA on Enterprise. If your deployment requires formal CJIS or FedRAMP certification, evaluate accordingly and talk to us directly about your specific requirements.

— PRICING

Air-gapped, self-hosted Docker deployment with a custom SLA is available on the Enterprise tier, starting at \$150k/yr with custom pricing for complex, multi-environment deployments.

PLAN	PRICE	WHAT'S INCLUDED
Developer	\$799/mo	1 AI agent under test, self-serve, no procurement call required
Professional	\$8,000/mo	Up to 25 monitored production workflows, 50,000 attack simulations/mo
Enterprise	\$150k/yr+	Unlimited workflows, air-gapped Docker deployment, custom SLA available

Find out if your dispatch or records AI can be broken out of — before someone else finds out first.
